Re: Committee Hearing on DTE electrical shut-offs, January 30, 2018

"DTE Energy Shut-off Of Electrical Service 10-22-2017

After decades of not knowing I was suffering from electrical pollution, I found out in 2006 that power line electromagnetic frequencies (EMF) were the cause! I installed Stetzer Electric Filters and had a dramatic remission in the rash that was all over my body. Since I have worked with electricity all my life, done electrical drafting, panel wiring etc. I have always had a good understanding of EMF and radio frequency radiation (RFR). I channeled that background into finding solutions to these unseen and unforeseen problems our electrified world is causing. For over the past decade I have been informing and helping people cope with the dangers of electrical pollution in the multiple forms it comes in.

I have been a long opponent to DTE Energy's excessive neutral to Earth bonding that causes ground currents and the "smart meters." I have had many confrontations with bullying DTE employees and contractors. It is no wonder people are locking their meters when threats are leveled at customers by bad DTE representatives.

One particular DTE "smart meter" installer was quite forceful toward me at our Troy house. He had no identification and only a navy blue jump suit with a DTE logo on it and a plain looking white van.

Following his threat: "We have people working in the field who will escalate this matter to the next level with you!.." our Silverwood residence was frequented many times by DTE employees at times that do not coincide with reading the meter. On two occasions two different people were caught on camera snooping around my pole barn and looking in the window.

The electric meters are on the house. The pole barn is 350 feet away from the house. I also found that many times after these visits and unusual inspections of my pole barn that there was damage to my pole barn. The lock to the entry door was destroyed and later the window was broken. I can not prove DTE employees did these acts, but it is interesting that each time our property had one of these unusual visits involving the pole barn, there were attempts at breaking into and or viewing whatever was in that structure.

There's other evidence of DTE damages as well.

Like many people just before this bitter cold winter, I received 2 DTE Shut Off Notices. The first was Oct. 13, 2017, not because I did not pay my bill, but because of my refused consent of a "smart meter" and "opt-out meter." My refusals were verbally many times over the phone, face to face encounters with installers and in writing 6 times prior via certified mail. However, instead of a power cut as threatened, an installer mounted 2 "opt-out meters" on my house which I could feel instantly Oct. 21. I immediately called DTE to remove the "opt-out meters" and they told me I could not have the analog meters back. I have not had electricity from DTE since Oct. 22, 2017!

To make matters worse there are virtually no good pure sine wave electric generators to be had in the country since the hurricanes in the fall. All major manufacturers are still sold out! So people like me that have been cut off by DTE with very little notice are hard pressed to generate their own power in this emergency situation, making our quality of life miserable at best and perilous in many cases! Instead of pulling up a chair to talk these matters over with customers, DTE pulls out a club and acts like a thug!
